While the Sub-Funds listed above have access to both internal and external ESG research and integrate financially material sustainability risks into their investment decision-making processes, ESG-related factors are considered but not determinative, permitting the relevant Sub-Investment Managers to invest in issuers that do not embrace ESG; as such, sustainability risks may have a more material impact on the value of the Sub-Fund's investments in the medium to long term. The investments underlying these Sub-Funds do not take into account the EU criteria for environmentally sustainable economic activities.

Investors should note that, relative to the expectations of the Autorité des Marchés Financiers, this fund presents disproportionate communication on the consideration of non-financial criteria in its investment policy.

Key Risks

Geographic concentration risk: investments concentrated in specific geographic regions and markets may be subject to greater volatility due to economic downturns and other factors affecting the specific geographic regions. **Equity Securities Risk:** These securities fluctuate in value and price in response to factors impacting the issuer of the security as well as general market, economic and political conditions. **ESG Risk:** Applying an ESG screen for security selection may result in lost opportunity in a security or industry resulting in possible underperformance relative to peers, ESG screens are dependent on third party data and errors in the data may result in the incorrect inclusion or exclusion of a security. **Global investment risk:** securities of certain jurisdictions may experience more rapid and extreme changes in value and may be affected by uncertainties such as international political developments, currency fluctuations and other developments in the laws and regulations of countries in which an investment may be made. **Issuer Non-Diversification Risk:** Focusing investments in a small number of countries, issuers or local currencies increases risk that a single negative financial, economic, market, political or regulatory occurrence has a greater impact on the value of securities. **Sector emphasis risk:** investing a substantial portion of assets in related industries or sectors may have greater risks because companies in these sectors may share common characteristics and may react similarly to market developments.
